After assembling the furniture, it is recommended to regularly ventilate the room in which the furniture is located, which should last for about four weeks or until the smell is eliminated.

- RU -

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may emit small amounts of substances used in production processes into the air in rooms. The level of these emissions has been tested and complies with applicable standards. After assembling the furniture, it is recommended to regularly ventilate the room with the furniture for about four weeks or until the smell is eliminated.

- CZ -

Furniture with wood-based panels (chipboard, wood fiber boards, plywood, etc.) may release small amounts of substances used in production into the air in the room. The level of these emissions is tested and complies with applicable standards. After assembling the furniture, it is recommended to ventilate the room where the furniture is located for about four weeks or until the smell disappears.

- SK –

Furniture that has some parts made of wood-based panels (chipboard, fiberboard, plywood, etc.) may release negligible amounts of substances used in the manufacturing process into the indoor air. The level of these emissions is tested and complies with applicable standards. After assembling the furniture , it is recommended to regularly ventilate the room where you have placed the assembled furniture. Ventilate for approximately four weeks or until the odor disappears.

- HU –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may emit small amounts of substances used in the manufacturing process into the indoor air.

The level of these emissions has been tested and complies with the requirements of the relevant standards. After assembling the furniture, it is recommended to ventilate the room regularly for approximately four weeks or until the smell disappears.

- BG –

Furniture in which wood-based panels (chipboard, wood fiber panels, plywood, etc.) are used may release insignificant amounts of substances used in the manufacturing process into the air in the room. The level of these emissions has been tested and meets the requirements of current standards. After assembling the furniture, it is recommended to regularly ventilate the room in which the furniture is located for about four weeks or until the smell disappears.

- TR –

Furniture containing wood panels (chipboard, plywood, etc.) may release small amounts of the substances used in their manufacture into the indoor air.

The level of these emissions has been tested and meets current standards. After installing the furniture, it is recommended to ventilate the room regularly for approximately four weeks or until the odor disappears.

- PT –

Furniture containing wood-based panels (particleboard, fiberboard, plywood, etc.) may emit insignificant amounts of substances used

in the production process. The level of these emissions is tested and complies with applicable standards. Once the furniture has been assembled, it is recommended that the room where the furniture is located be ventilated regularly for approximately four weeks or until the smell has disappeared.

- SLO –

Furniture made of wood-based panels (chipboard, fiberboard, plywood, etc.) may emit insignificant amounts of substances used in the production process into the indoor air. The level of these emissions is tested and complies with applicable standards. After installing the furniture, it is recommended to regularly ventilate the room in which the furniture is located. Ventilation should last for approximately four weeks or until the smell disappears.

- NL –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may emit insignificant amounts of substances used in the manufacturing process into the indoor air. The level of these emissions is tested and complies with applicable standards. Once a piece of furniture has been assembled, it is advisable to regularly ventilate the room in which it is placed for approximately four weeks or until the odor has disappeared.

- SRB –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may emit insignificant amounts of substances used in the production process into the indoor air. The level of these emissions is tested and complies with applicable standards. After installing the flooring, it is recommended to regularly ventilate the room with the flooring, which should take about four weeks or until the smell is eliminated.

- EST –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may release small amounts of substances used in the manufacturing process into the air.

The emission level has been tested and complies with current standards. After assembling the furniture, it is recommended to regularly ventilate the room with the furniture, which should last about four weeks or until the smell disappears.

- RO –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may emit insignificant amounts of substances used in production processes into the environment. Insignificant quantities of substances used in the manufacturing process into the environment. The level of these emissions is measured and complies with the standards in force. After assembling the furniture, it is recommended to ventilate the room regularly for approximately four weeks or until the smell disappears.

- HR –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may release into the air small amounts of substances used in production processes. The level of these emissions has been tested and meets the applicable standards. After assembling the furniture, it is recommended to regularly ventilate the room where the furniture is located, which should be done last about four weeks or until the smell disappears.

- IT –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may emit insignificant amounts of substances used in the production process into the air in the rooms where such furniture is installed. The level of this emission is controlled and meets applicable standards. After assembling the furniture, it is recommended to ventilate the room with this furniture regularly, which should last about four weeks or until the odor is eliminated.

- UKR –

Furniture containing wood-based panels (oriented strand board, fiberboard, plywood) may release small amounts of substances used in the manufacturing process into the air in rooms. The level of these emissions is measured and complies with current standards. It is recommended to regularly ventilate the room where newly assembled furniture is located – this should last for about four weeks or until the smell disappears.

- LT –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may release small amounts of substances used in the manufacturing process into the air in the room. The level of these emissions is measured and complies with current standards. It is recommended to regularly ventilate the room where the product is located for about 4 weeks until the smell completely disappears.

- LV -

Wooden furniture (chipboard, fiberboard, plywood, etc.) may release small amounts of substances into the room that are used in the manufacturing process. The level of these emissions is being studied and complies with current standards. After installing the furniture, it is recommended to regularly ventilate the room where the furniture is located – for at least four weeks or until the smell disappears.

- FI –

Furniture containing wood-based panels (chipboard, fiberboard, plywood, etc.) may release small amounts of substances used in the manufacturing process into the indoor air. The level of these emissions has been tested and complies with current standards. After installing the furniture, it is recommended to ventilate the room where the furniture is located regularly for at least four weeks or until the smell has disappeared.
